UAV Systems: Breakthroughs and Hurdles
Dr. Arthur Richards, University of Bristol

The talk will start with a much-abridged review of 90 years of Unmanned Air Vehicles (UAVs), leading up to the enormous growth over the last decade or so. The second part will look at future prospects for UAV operations, with a focus on autonomy. Autonomy has been the subject of much research, as it offers the promise of greater operational tempo, but it also poses interesting questions about certification.

6.30pm Wednesday 16th December 2009
Room 1, BAWA Leisure Centre, Southmead Rd, Filton
